best protection for your technology

With industries continually under pressure to improve their processes and reduce costs, well designed, validated and efficient processes are essential to success.

Leading companies are using outside services to leverage their capabilities and allow themselves to strategically engage their own resources and talents in core competencies.

As a leader in custom build systems, fabricated in polymer plastics, Teblick has long been in a unique position to provide technical services in the fabrication of filter housing. The experience and specialized skills that we have developed have helped many companies to achieve their objectives and attain their perfect solution to house their technology.

For especially demanding applications, Teblick will custom craft a filter housing to meet specific customer requirements. The filter body can be in different type of plastic (PP, PE, PVDF even PFA) to provide the compatibility required for many different aggressive fluids.

If you can imagine it, we can make it. From one single prototype to batches of more than 100 pieces.

That's why Teblick has been the unrivaled expert and preferred OEM partner in plastic construction for over 40 years.
