skid mounted liquid handling systems

Plastic Constructions R. Teblick has grown to become one of the most respected companies in the design and manufacture of custom build systems, serving various industrial markets in Belgium and Europe. Our company has an enviable reputation for quality and a strong philosophy of individually tailored services meeting customer needs, anticipating change and proactively seeking and advising the best solutions.

Our technical and design capabilities arise from our extremely skilled and motivated team, who are available to provide not only know-how, but a tangible level of dedication that makes things happen, getting projects going quickly and expertly.

Teblick is also specialized in the design and manufacturing of skid mounted liquid handling systems.

Our customers are offered the services of our application engineers to assist in the design of the unit. Starting from a sketch and the given specifications, our engineering office works out the details: the choice of the most appropriate material, calculating the necessary strength and resistance requirements, dimensioning all parts, etc.

The system is mounted on a heavy duty solid steel frame for maximum durability.

Extensive test facilities are in place. Together with our specialized equipment and skilled personnel, our premises are perfectly suited for the development of your unit or prototype.
