Installations

Leading to excellence

plastic piping systems

From the early days in 1958, when the first plastic pipeline was laid in Belgium by Plastic Constructies R. Teblick, we have continued to play a more than prominent role in the design, construction, delivery and installation of high-quality plastic piping systems for all branches of industry.

In 1995, Plastic Constructies R. Teblick was the first company to weld +GF+ George Fischer IR fittings and piping.

Our skilled and experienced personnel guarantees impeccable on site installation and also provides excellent service, leaving the competition far behind. For qualitative and reliable high-pressure pipe installations, we purchase only from highly qualified suppliers - and if the specified fitting is not available on the market, we simply make it!

We cover not only 'common' piping systems such as HDPE, PP, PP-s, PVC, PVC-C and PVDF but also more 'exotic' materials such as PVDF-HP&BCF, ECTFE and PFA.

Moreover, based upon today's stricter environmental legislation, we are qualified to implement double containment piping systems with leak detection, not only above- but also underground: the ultimate safe approach for the distribution of high-risk chemical solutions. No more worries about possible underground leakages! These double containment piping systems bring out the best in us: we can even combine different materials, like HDPE outside and PVDF inside.

Butt fusion, socket fusion, electro fusion, IR-fusion and BCF fusion technology, there is no plastic welding technique on earth we cannot master!

On request, a detailed study can be carried out by our engineering staff to optimise pipe-line routing, resulting in P&IDs and isometric drawings for approval.

Our piping systems are installed following suppliers' guidelines of good practice and can be equipped with additional support systems like valves, pumps, pressure relief valves, ball check valves, etc.

Installation of plastic piping in new premises or an old production hall, prefabricated or built on site: the minimum aim is always to meet the clients' highest standards and deliver a reliable piping system.
