For more than 35 years Plastic Constructies R. Teblick has had the knowhow for designing and building custom-made atmospheric vessels and tanks. Our high-quality plastic constructions and installations support key processes in leading companies throughout Europe. You will find our reliable industry-proof installations in both chemical plants and pharmaceutical labs, as well as in the semicon industry.

Based upon the required operational conditions (e.g. temperature, medium, etc.) our engineering staff designs the tank (or double containment tank) and chooses the most appropriate construction material. To ensure long-term operation, the chemical resistance is checked thoroughly.

If required, we can offer you a complete installation with tanks, pumps, valves, piping, electrical cabinets, control panels, leak detection, level monitoring, etc., even from scratch!

For Ugine & ALZ at Genk (Belgium) we designed and constructed an acid process vessel measuring more than 13 meters in length.

Using 50 mm polypropylene (PP) sheets, custom-made for this project, we completed the tank in less than 3 weeks time.

Delivery and installation on site was done in another 5 days.

Even in large dimensions, we keep our promises; high quality and fast delivery.
